SUMMARY

Highly motivated and driven computer science student actively pursuing studies in the field. I am eager to
leverage my technical skills and passion for innovation to contribute to cutting-edge projects in the tech
industry. I seek a challenging role that allows me to apply and enhance my knowledge while collaborating with
a talented team to develop innovative solutions that make a meaningful impact.

PROJECTS

ATM Simulator Project (C++)
The ATM Simulator Project is a C++ program that mimics the functions of a real ATM machine.

Object Oriented Programming

React JS Calculator
I developed a dynamic calculator application using React.js, a popular JavaScript library for building user interfaces.

ReactJS

Country Heads Meeting Tracker
A "Country Heads Meeting Tracker" is a system designed to manage and keep records of meetings involving the heads or leaders of a company.

HTML, CSS, Bootstrap, ReactJS

Final-Year PMS (FYP)
It's a platform that manage final year projects of students and facilitate both supervisor and students. This system aims to provide an organized framework for students, supervisor and coordinator to work effectively and successful completion of high-quality projects. This is my final year project and made in HTML, CSS, Bootstrap 5, PHP, MYSQL. Currently in development, this is my FYP.
